#### CAUTION:

Follow label directions. Consumption of selenium should not exceed 3 mg per head per day.

#### Feeding and Management

##### Mineral Program

Sweetlix<sup>®</sup> CopperHead<sup>®</sup> LS with RainBLOC<sup>™</sup> is a specially formulated low salt supplement for coastal regions where soil salt content may inhibit mineral consumption. Sweetlix 6% CopperHead LS with RainBLOC is a 4:1 calcium to phosphorus mineral

scientifically formulated to be fed free choice to beef cattle on pasture. 6% CopperHead LS with RainBLOC helps your animals attain maximum performance by providing a balanced intake of supplemental minerals and vitamins. All ingredients are selected for high biological availability and stability to deliver optimal nutrition to your livestock. The addition of RainBLOC to this product results in an improved resistance to moisture. Typically, following a rain event, a thin, pliable crust forms on the top of this product (when in a good mineral feeder) and protects the product below the crust from becoming hardened. This crust is easily consumed by cattle and does not need to be broken apart. Results may vary during periods of extreme rainfall.

##### Free Choice Recommendations

Mature beef cattle should consume 4 oz. per head per day. Four (4) ounces of this product provides 3 mg selenium. Provide one covered mineral feeder for every 20 to 30 animals. Locate each mineral feeder near a clean, fresh source of water. Mineral consumption levels will vary depending upon the mineral status of the animals.
