FEEDING AND MANAGEMENT

Sweetlix® Goat Kid Milk Replacer is a medicated instant milk replacer scientifically formulated for the nutritional needs of goats. Sweetlix Goat Kid Milk Replacer helps kids attain maximum performance by delivering balanced nutrition designed especially for the needs of goats along with Deccox® for prevention of coccidiosis. All ingredients are selected for high biological availability and stability to deliver optimum nutrition to your kids.

COCCIDIOSIS CONTROL PROGRAM

When used as directed, Sweetlix Goat Kid Milk Replacer will deliver sufficient decoquinate (Deccox) to prevent coccidiosis in young goats caused by *Eimeria christensenii* and *Eimeria ninakohlyahimovae*. Kids should receive 22.7 mg decoquinate per 100 lbs. bodyweight (0.5 mg/kg) per day for coccidiosis control. Feed at least 28 days during periods of exposure or when experience indicates that coccidiosis is likely to be a hazard.

HAND FEEDING:

The following instructions are a guideline for hand feeding kids. Reconstituted milk replacer should be approximately 90°-100° F.

| Age of Kid (days) | No. Feedings Per Day | Maximum Pints Per Kid Daily |
|-------------------|----------------------|-----------------------------|
| 1 | 4 | *Colostrum |
| 2 - 5 | 3 - 4 | 1 |
| 6 - 10 | 2 | 1 1/2 |
| 11 - Weaning | 2 | 2 - 3 |

TIPS ON FEEDING:

1. All equipment used for mixing and feeding should be thoroughly cleaned after each usage.
2. Feed colostrum within the first 3-4 hours after birth and continue for the first 24 hours of life. *
3. Provide fresh, clean water daily.
4. Provide high quality dry feed free choice after kids are 7 days old.

*Some goat producers choose not to allow newborn kids to nurse their dams or drink raw colostrum due to the risks of transmission of C.A.E. and other diseases. If you choose to follow this practice, offer heat-treated colostrum (heat to 135° F and hold at this temperature for 1 hour if heat treating of colostrum is desired) to newborns and continue feeding with Sweetlix Goat Kid Milk Replacer after the first 24 hours.

MIXING INSTRUCTIONS:

Cup enclosed in each bucket holds approximately 4 oz. dry weight. Mix 1 level cup of Goat Kid Milk Replacer in 1.5 pints of 110°-120° F water. Slowly add powder to water while stirring.

FREE CHOICE FEEDING:

Use of a free choice feeder requires that the milk replacer solution be kept cold (approximately 40° F) to prevent overconsumption. Train 1 or 2 kids at a time. Some will not learn as quickly as others, but it is worth the trouble to teach them.
