

HORIZON EXCEL FEEDING DIRECTIONS:

Horizon Excel 10- all natural 10% protein, sweet textured, palatable horse feed formulated for pasture and pleasure horses. It is designed to supplement horses consuming average to good quality forages. Excel 10% also contains minerals and vitamins to supplement your horse. Excel 10 should be fed at a rate of 1 lb. per 100 pounds of total body weight. Individual horse differences may require a feeding rate adjustment of plus or minus 10% of amount indicated and can be determined by evaluating body condition of the horse

Horizon Excel 12%- all natural 12% protein, sweet textured, highly palatable horse feed containing Oats, Corn, Molasses and a Concentrate Pellet. This feed is formulated for active horses consuming average to good quality forages. Horizon Excel 12% provides proper balance of energy, protein, minerals, and vitamins to meet the nutritional needs of the active horse. This feed contains Biotin for hoof and foot health as well as natural electrolytes such as Potassium and Sodium to replace that loss by the horse during heavy activity. Feed to active horses at a rate of .5 to 1 lb. per 100 pounds of body weight. Individual horse differences may require a feeding rate adjustment of plus or minus 10% of amount indicated and can be determined by evaluating body condition of the horse.

Horizon Excel 14%- all natural 14% sweet textured, highly palatable, premium horse feed that can be fed to mature working horses in all stages of training and competition. Excel 14% provides energy from a combination of fat, grains, and soluble fiber, providing an energy boost without the risk of digestive problems, while also providing the correct balance of amino acids (building blocks for protein) for greater muscle development. Skin and coat will respond to the extra fat, while Excel 14% also contains supplemental electrolytes, to nourish muscle fibers. This feed also contains elevated Biotin levels for hoof health and Vitamin E levels to promote immune response during times of stress. Horizon Excel 14% also contains chelated minerals for greater mineral absorption and utilization. Feed at a rate of .1 to 1 lb. per 100 pounds of body weight based upon daily work regimen of the horse. Individual horse differences may require a feeding rate adjustment of plus or minus 10% of amount indicated and can be determined by evaluating body condition of the horse.

Important Management Practices:

When making changes in the animal's diet, do so gradually, planning for a 7 to 10 day transition period for the horse. Do not feed if wet or moldy. Do not allow feed to stay in feeder for a period of longer than 3 days. Keep feed in a clean container free from insects and rodents. Provide ample feeder space for horse. Provide adequate forage and clean water on a daily basis. Poorly managed feeding programs can lead to nutritional disorders. Before making drastic changes to an animals diet, contact an Animal Nutritionist.
